Executive Summary

This deliverable outlines crucial considerations when it comes to publishing data for potential reuse. The central element in this context is the availability of data in a machine-readable format, a paramount requirement without which any subsequent research or data modelling efforts would face significant challenges.

Despite not being obligated to disclose datasets, the consortium has taken proactive measures to release an anonymised dataset derived from the RAYUELA pilots. The dataset contains information gathered during the pilots conducted across various European Union member states as part of the RAYUELA project. Importantly, these pilots involved minors, with supervised sessions conducted in educational institutions and summer camps, ensuring strict adherence to safety and ethical standards.

For the convenience of potential dataset users, the dataset has been made accessible through Zenodo¹, a platform dedicated to promoting open access to scientific and research data.

By providing access to this data, the consortium not only supports future research efforts but also upholds transparency and fosters collaborative knowledge-sharing within the broader academic and research community.

This deliverable provides details about the dataset, including its origin and the rationale for making the data open (Section 3). Section 4 outlines the procedure for publishing data on Zenodo, while Section 5 delineates the steps taken to comply with GDPR regulations. Finally, Section 6 elucidates how the FAIR principle is being implemented.

1. Data resulting from WP6 Activities

1.1 WP6 – Data from RAYUELA pilots

This dataset contains the data collected from minors who have participated in the pilots of the RAYUELA project. From each participant we have collected demographic data (Age, Gender, Sexual Orientation, Migratory Background, Location, School Type, Daily number of hours spent using the Internet for leisure), the results of some psychological tests validated by the scientific community (social and family support, Big Five personality traits model, self-esteem and previous cyber-victimization/aggression) and finally the gameplay data (selected answers). No information is collected without the player's consent.

At the beginning of the session the participants had to register on a website where they are assigned a username and password that will allow them to play later. During this registration, the validated psychological tests are also carried out, apart from the cyber-victimization/aggression questionnaire, in an attempt not to bias the answers given by the minors to the questions posed by the game.

In the event that participants are unable to finish the game completely, they can access the final quiz at any time. This feature was implemented for the last pilot phase, so there are participants who did not answer the final questionnaire.

¹ <https://zenodo.org/>
Contract No 882828

1.2 The origin of the data

The dataset has been generated from data collected during pilot projects conducted by the RAYUELA project across various European Union countries. These pilot projects involved minors, and the game sessions took place in schools and summer camps under careful supervision.

As far as possible, an attempt was made to homogenize the playing conditions of the participants, although some factors were not under the control of the RAYUELA members (e.g., the time that the schools could devote to the game sessions).

1.3 Reason for opening data

We believe that the data gathered could be of great use to the scientific community. Motivating other researchers to explore the dataset and try to validate or discuss the conclusions obtained. Obtaining as a result a better understanding of the social problems addressed in RAYUELA and a significant example of open and honest science. Which could translate into better prevention and mitigation policies.

2 Publication of Dataset(s) on Zenodo

Zenodo is one of the recommended repositories in line with the "Guidelines to the Rules on Open Access to Scientific Publications and Open Access to Research Data in Horizon 2020".

Within the framework of European Union Horizon 2020 projects, Zenodo operates as an expansive digital repository, comparable to a highly regarded online archive. This platform provides space for researchers and consortia to securely archive and distribute their research outputs, thus contributing significantly to the collective knowledge base within the scientific community. Zenodo represents a structured and easily accessible resource, purpose-built to facilitate the seamless sharing of a wide range of research materials, encompassing research papers, datasets, and associated scholarly content.

In the context of EU Horizon 2020 projects, Zenodo assumes a central and pivotal role, actively promoting the principles of open and collaborative knowledge exchange. It is aligned with the overarching mission to advance transparency and nurture innovation within the dynamic landscape of European research.

2.1 Data Set Metadata – Recommended Fields

Table 1 presents a comprehensive summary of the requisite metadata details essential for the publication of data within the Zenodo repository. This table enumerates the specific requirements, offers explanations for each mandatory metadata element, and provides corresponding values. Following the provision of all the necessary metadata, the dataset has been successfully published on Zenodo, as depicted in Figure 1. It is now readily accessible to the research community, facilitating its subsequent utilization for further studies.

RAYUELA - Open Data - Data collected through a serious game created to identify patterns and profiles of young potential victims/perpetrators of cybercrimes.

Authors: Jaime Pérez Sánchez, Gabriel Antonio Valverde Castilla, Gregorio López, Mario Castro, María Reneses Botija, María Riberas-Gutiérrez, Nereida Bueno-Guerra

The data of this dataset have been collected in the pilots carried out by the RAYUELA project in different countries of the European Union. The participants are minors and the game sessions have been carried out in schools and summer camps in a supervised way.

Age	Gender	Sexual_Orientation	Migratory_Background	Location	School_Type	Hours_Intern
16.0	Man	Heterosexual	No, I was born in this country and so were my parents	Spain	Public

The dataset was added to Zenodo on September 15, 2023. Since its publication, it has garnered attention, receiving 24 views and 18 downloads. According to Zenodo's statistics, it's worth highlighting that out of these 24 views, 15 are unique (first-time viewers), contributing to a total of 10 unique downloads. Figure 2 displays statistical data from Zenodo.

The data of this dataset have been collected in the pilots carried out by the RAYUELA project in different countries of the European Union. The participants are minors and the game sessions have been carried out in schools and summer camps in a supervised way.

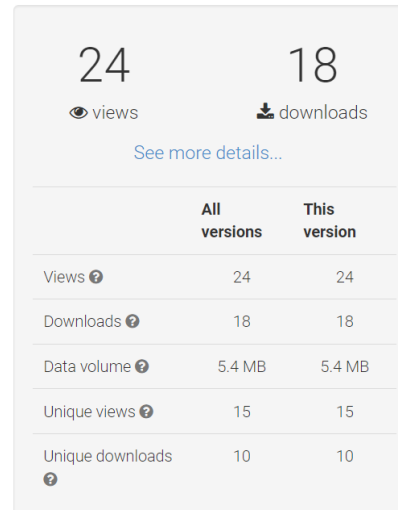

Figure 2. Depiction of Zenodo statistics.

3 Steps taken to comply with GDPR

To ensure GDPR compliance and uphold intellectual property rights (IPR) neutrality for the dataset slated for publication, a following measures have been implemented:

- We have meticulously curated the dataset, retaining only those attributes that are directly pertinent to the scientific community's research needs and are free from any IPR constraints.

- We have undertaken specific actions to enhance privacy and data protection. This includes the removal of specific data points such as "Registration date" and "Player ID." Additionally, we have introduced randomization in the arrangement of dataset rows to prevent potential identification based on the timing of game sessions.

These steps have undergone thorough discussion and consensus within the team responsible for data collection and analysis, in conjunction with the legal experts from the RAYUELA project. This approach ensures not only GDPR compliance but also safeguards the dataset's IPR-free status in line with the principles of the European Union's Horizon 2020 program.

4 Compliance with FAIR Principles

The FAIR Guiding Principles² – FAIR—Findable, Accessible, Interoperable, Reusable – best describe the properties of Open Data. Applying these principles to the Data Set in focus will ensure excellent description and presentation of your Data Set from various criteria of metadata.

In the context of Open Data, it is considered best practice to construct Metadata with a thoughtful consideration of potential data re-users. Crafting metadata accurately not only facilitates the implementation of filtering and search capabilities, but also enhances the discoverability and accessibility of dataset tailored to the specific repository chosen for publication.

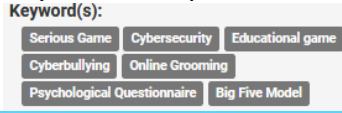

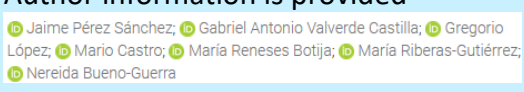

We've put together a checklist that lists the metadata elements that need to be specified, along with the methods and criteria for checking them. Table 2 gives you an overview of how well our dataset follows the FAIR principles when we publish it.

Table 2. FAIR principles validation

Metadata Item	Validation Method, Criteria	RAYUELA - Open Data - Data collected through a serious game created to identify patterns and profiles of young potential victims/perpetrators of cybercrimes.

4.1 Validation After Publishing

In our commitment to ensuring that the published dataset fully complies with the FAIR principles, we validated compliance after publishing data on Zenodo. This step aligns with the guidelines provided by the FAIR principles, emphasizing the critical importance of making data findable and accessible to the community. The validation process served as a quality check, confirming that our dataset met the criteria set by the FAIR principles. By conducting this post-publication validation, we could provide a level of assurance that the dataset adhered to the principles of Findability and Accessibility.

Table 3 Validation After Publishing

	Metadata Item	Validation Method, Criteria
☒	Metadata of the Data Set must be indexed and searchable	Perform search for the data set using predefined search keywords
☒	Data Set can be found by intended means of lookup and search	Make sure that Data Set can be found by intended means of lookup and search
☒	Data Set is accessible for free download to anonymous user	Make sure that Data Set is accessible for free download to anonymous user

5 Conclusions

The deliverable highlights essential considerations for publishing data for potential reuse, emphasizing the importance of machine-readable data availability. Despite no strict obligation to open any dataset resulting from the project activities, the consortium released a dataset from RAYUELA pilot projects. The dataset from RAYUELA includes demographic, psychological, and gameplay data, all collected during RAYUELA pilots across EU countries in schools and summer camps.

In alignment with the recommendations for EU Horizon 2020 projects, we have chosen Zenodo as the repository for publishing the resulting dataset. Zenodo's status as an Open Data repository, specifically recommended for EU Horizon 2020 projects, underscores its suitability for our data sharing endeavours. Tilde's in-house data experts conducted an assessment to ensure adherence to the FAIR principles during the publication of the dataset. The FAIR principles represent a set of guidelines designed to enhance data discoverability, accessibility, interoperability, and reusability. These efforts have resulted in a dataset that is accurately described, effectively presented, and compliant with the appropriate metadata standard. To streamline this process, we have developed a checklist that encompasses all the necessary metadata elements required to align with the FAIR principles.

In summary, this deliverable showcases the consortium's commitment to open and transparent science, facilitating data access and collaboration while adhering to essential regulatory and ethical considerations.
